Synthetic Radiology Report - Not a real patient record

Patient: Avery Sample
Patient ID: SYN-PDF-2002
Exam date: 2026-04-17
Exam: Chest radiograph, PA and lateral views
Reason for exam: Cough for two weeks
Comparison: None available

Findings:

The cardiomedial silhouette is within normal size limits. There is mild linear atelectatic or scarring opacity at the left lung base. No focal air-space consolidation is seen. No pleural effusion or pneumothorax is identified. Mild multilevel degenerative change is present in the thoracic spine.

Impression:

Mild left basilar linear atelectatic or scarring change. No acute cardiopulmonary abnormality identified on this exam.

Testing note: This narrative report should produce plain-language findings, medical terms, and doctor questions. It should not produce a lab-value table unless the model finds actual measurable values in the report.
