

Harbor Primary Care
Synthetic Outpatient Visit Note - Not a real patient record

Patient: Jamie Demo

Patient ID: SYN-PDF-2003

Visit date: 2026-05-26

Reason for visit: Intermittent headaches and fatigue

Subjective:

Patient reports dull headaches on three days in the past two weeks. Headaches are described as mild to moderate and often occur after long workdays. Patient also reports sleeping about five hours per night. No fainting, no chest pain, and no severe shortness of breath are documented in this note.

Vital signs:

- Blood pressure: 128/82 mmHg
- Heart rate: 76 bpm
- Temperature: 98.4 F
- Oxygen saturation: 98%

Exam:

General appearance is documented as comfortable and alert. Neurologic exam is documented as grossly non-focal. Neck is supple. Lungs clear to auscultation. Heart rhythm regular.

Assessment section copied from note:

Clinician wrote: tension-type headache suspected; fatigue; sleep disruption.

Plan section copied from note:

Clinician ordered CBC, CMP, TSH, and ferritin. Patient was asked to keep a sleep and headache diary and return for follow-up in four weeks, or sooner if symptoms worsen.

Testing note: MedExplain should explain what this note says and help prepare questions, but should not diagnose the user or give independent treatment advice.
